PROFESSIONAL SUMMARY

Software Engineer and Front-End Developer with 6+ years of experience building responsive web applications, connected-device experiences, CMS-driven websites, and full-stack features. Strong background in React, Next.js, TypeScript, JavaScript, Node.js, WordPress/PHP, API integration, and Agile delivery. Known for translating wireframes and client requirements into maintainable user experiences, improving performance/accessibility standards, mentoring teammates, and making practical architectural decisions across fast-moving product environments.

CORE TECHNICAL SKILLS

Front End JavaScript / ES6, TypeScript, React, Next.js, AngularJS, jQuery, HTML5, CSS3, SASS/SCSS, Bootstrap, Material UI, Styled Components, Angular UI Router, Angular UI Bootstrap, Moment.js, Parcel

Middle Tier Node.js, Express, Joi, Typings, Gulp, Babel, ES6 Promises, async/await, API consumption, JSON validation

Back End / CMS MongoDB, MLab, PostgreSQL, MySQL queries, PHP, WordPress, WordPress plugins, Pantheon, Terminus, Lando

Platforms / Tools Git, GitHub, Visual Studio Code, Chrome DevTools, bash/zsh, Docker, AWS Bastion, Xcode, Android Studio, Robo3T, Cloudflare

Methods Agile/Scrum, peer code review, client demos, technical documentation, accessibility, performance optimization, cross-functional design collaboration

PROFESSIONAL EXPERIENCE

Connected Devices Engineer | Mercury Intermedia

September 2022 - Present | mercury.io

- Initiated development of a Next.js application for Samsung Smart TVs and Xbox for a nationally recognized sports broadcaster, helping establish the application foundation for connected-device delivery.
- Defined team best practices for JavaScript spatial navigation to support remote-control input and consistent TV-app user interactions. • Made high-impact architectural decisions, including state management with Context API, CSS-in-JS strategy with Styled Components, and maintainable Next.js implementation patterns.
- Implemented TypeScript strategies that improved React component type safety, reliability, and maintainability across the codebase. • Integrated Node.js APIs to populate React components with database-driven content and manage asynchronous state updates using promises and async/await.
- Used video.js to support API-driven video playback behavior, including accurate play/pause functionality within the application experience.
- Expanded platform knowledge by learning Roku/BrightScript and iOS/SwiftUI stacks to better support multi-platform connected-device development.

Software Engineer II | SnapIoT

October 2021 - April 2022 | snapiot.com

- Delivered client-requested product enhancements, including translation support and low-code platform updates designed to function across iOS and Android experiences.
- Used Git cherry-pick workflows to safely propagate updates across multiple client feature branches, including security-related changes and proprietary key updates.
- Translated wireframes into functional interface updates while accounting for multilingual layouts and platform constraints. • Updated widgets using JavaScript, HTML, and CSS, adding modal functionality and dynamic dropdown behavior based on user/platform requirements.
- Performed release-support tasks in Xcode and Android Studio to help ship updates to the App Store and Google Play Store. • Wrote MySQL queries to investigate duplicate questionnaire entries and support data-driven troubleshooting. • Configured AWS Bastion access to client servers and databases to run queries and support secure client-environment troubleshooting.

Noble Studios

July 2019 - September 2021 | noblestudios.com

- Built and maintained WordPress websites for clients across multiple industries using JavaScript, CSS, SASS/SCSS, Yarn, PHP, and CMS customization.
- Managed client website maintenance by improving features, updating PHP versions, reviewing plugin impacts, and protecting site stability during changes.
- Improved site performance and browser load times using Cloudflare and helped modernize websites around Google Core Web Vitals and SEO-related performance requirements.
- Worked with accessibility standards, including WCAG 2 guidelines, to support more inclusive and compliant website experiences. • Collaborated with designers in working sessions to understand component intent, provide development input, and translate designs into practical implementation plans.
- Led client training meetings for new or specialized website features, helping non-technical stakeholders understand and manage their tools.
- Participated in daily standups, clearly communicating priorities, blockers, progress, and deliverables within an Agile team environment. • Introduced TypeScript on newer projects to strengthen type safety within JavaScript files and improve long-term quality.

React Full Stack Developer | Loyal Assistant

August 2018 - April 2019 | loyalassistant.com

- Built an interactive React quiz experience with conditional question logic and MobX state management for complex user flows. • Used Material UI to create form interfaces that displayed database-backed content and enabled users to update information efficiently. • Developed Express APIs with JSON validation using express-validator and routed data into PostgreSQL tables. • Participated in daily scrum meetings with the CEO and Lead Developer to clarify priorities, remove blockers, and align on product goals. • Contributed input on website design, user functionality, and data-handling decisions to improve the overall product experience. • Mentored a fellow developer on React fundamentals, including state, props, component attributes, and practical implementation patterns. • Self-taught MobX to support the organization's state-management approach and contribute quickly to the existing codebase. • Developed a notification/alert system to help users understand their status and progress within the platform workflow.

Full Stack Developer | Laso Concepts

July 2017 - December 2017 | lasoconcepts.com

- Rapidly prototyped full-stack features using AngularJS components, UI Router, RESTful APIs, Express, and MongoDB. • Built an administrative data-management interface for adjusting or removing user accounts and user-generated content. • Created a blogging platform with scheduled publishing, pagination, rich-text editing, and HTML sanitization to reduce XSS risk. • Developed notification and direct-messaging systems, including user restrictions based on healthcare location and institutional tenant rules.
- Leveraged Express routing stacks to enforce authentication, model validation, authorization, and cleaner API interactions. • Designed reusable AngularJS components for file upload and address forms, standardizing UI behavior and reducing repeated API-interaction logic.
- Used MongoDB unique indexes to protect against duplicate user-generated content and improve data integrity. • Participated in standups, client demonstrations, feedback meetings, peer code reviews, technical presentations, and product ideation sessions.

EDUCATION

Bachelor of Science in Audio Production | The Art Institute of California | June 2013

SELECTED STRENGTHS

Cross-platform problem solving | API-driven UI development | Client communication | Design-to-development collaboration | CMS maintenance | Performance and accessibility awareness | Technical mentoring | Agile delivery
